Skin Evaluation and Management for Preventative Care

- The skin is our first line of defense. We monitor for any abnormal changes in the skin that can lead to more serious conditions.
- We perform preliminary skin/wounds audits monthly
- Early detection program

Who Benefits???

Your organization

- The facility will never be billed by our group. We bill on Medicare Part B of the patient's insurance.
- Referrals should be based on the patient's need rather than their insurance. If there is a wound/skin disorder on the patient, we will manage it regardless of payment. Every patient in your facility deserves the same level of care.
- A good team is a knowledgeable team. Wound education will be provided to the nursing staff.
- We are on-call for urgent needs and can perform telemedicine when required.
- We work with your organization to create a cost-effective system.
- We communicate with other physicians regarding their patient's care and condition.
- We practice defensive documentation
- After discharge from facilities, the patient will go home with treatment plans and if needed, home visits by one of our practitioners.

The Patient

- We provide weekly evaluations/management of wound rounds to optimize wound healing.
- Our services are completely covered by insurance. The patient can rest assured that they will not receive a hefty bill from our office.
- We manage compliance with follow-ups by coming to the patients. Transportation can be costly and time consuming. Our methods of bedside treatments have been shown to reduce healing times and infection rates.
- Procedures are mostly performed at bedside.
- Using the PWS wound delivery system, we tailor the treatments according to each individual patient's needs.

Professional Wound Specialists is a comprehensive wound group partnering with medical organizations to provide standard defining systems of treatment with a cost-effective mindset to heal wounds. PWS is in California, Idaho, New Mexico, Nevada and Utah.
